## RESEARCH INTERESTS

---

My research focuses on forgetting in AI — an essential ML challenge for machine unlearning, continual learning, and trustworthy foundation models or agentic AI. Specifically, I have investigated forgetting in vision models and image generative models. More recently, I'm working on extending to trustworthy AI for large multi-modal models. My work explores two key areas:

- Machine unlearning for responsible generative AI
- Preventing catastrophic forgetting in foundation models and agentic AI.

Additionally, I'm interested in model acceleration, image restoration, and histopathological analysis.
